In January 2019, IDM Research, a domestic professional think tank, released the Overall List of Major World University Rankings 2018, revealing the comprehensive strength of 1798 universities worldwide, including 149 in China. SCUT currently ranks 17th among mainland universities and 356th globally, up 40 places from 2017.

2019 1798 356 2017 40 2018 149 17

The Overall List of Major University Rankings has been released for three consecutive years since 2016. Based on China 's most popular ranking systems, namely the QS and THE of Britain, US News, and ARWU of China, the list is obtained by calculating the average ranking of each university in the four ranking systems and sorting the averages in descending order.

Judging from specific performance indicators, SCUT has significantly improved in teaching, research, internationalization, and particularly, number of citations and industrial income. While forging ahead with its development as a double first-class university and the construction of Guangzhou International Campus, SCUT orients itself towards global scientific frontiers, major national needs and emerging interdisciplinary studies. An increasing number of leading innovative talents are gathered and fostered at SCUT, where they solve major scientific and technological problems, demonstrate high-level achievements, and contribute to economic and social development. As a result, SCUT is growing in overall strength, international competitiveness and influence.

Following the first installation of the prefabricated building in Block E and the closure of the first floor in Block S, the public laboratory building in Block T and the A1 building in Block A were capped on the morning of February 1. This represents another important step forward, marking a new phase in the construction of the new campus. Standing at 23.84 meters tall, the public laboratory building is located near the central axis of the campus, with five floors above ground and one underground. It covers an area of 55, 000 square meters, encompassing labs, lecture rooms, the engineering training center and the computing center.

The 12th China Industry-University-Research Cooperation Innovation Conference was held in Beijing on January 6. SCUT was recognized for its outstanding contribution to the transformation of S&T achievements, winning the 2018 China Industry-University-Research Cooperation Promotion Award. Prof. Chen Yangzhi and Prof. Wang Zhenmin, from the School of Mechanical and Automotive Engineering, won the first prize for Industry-University-Research Achievements as well as the Award for Industry-University-Research Cooperation and Innovation.

1 6 2018

In February, the Science and Technology Department of the Ministry of Education announced SCUT as one of the first universities recognized as an S&T Achievements Transformation and Technologies Transfer Base.

2

With this new undertaking, SCUT will respond to the needs of our country and the Greater Bay Area more actively. We will push forward supply-side reforms required to transform S&T achievements, create a system for industrializing academic innovations, and promote interaction between disciplines, talents, scientific research, industries as well as other elements. In this way, we hope to link up the entire chain of basic research, application and development, achievements transfer and industrialization, and pool domestic and overseas resources to build a world-class R&D transformation center. We believe the center will be a major driver for S&T innovation and transformation in the Greater Bay Area, further promoting it as a world-class innovation and technology hub.

On February 22, the Chinese Higher Education Association released the results of an evaluation of innovative talent training and discipline competitions from 2014 to 2018. SCUT ranked 8th nationwide with 75 awards and a total score of 93.91 points, up 10 places from 2017.

2 22 75 93.91 2014-2018 8 2017 10

SCUT has been actively promoting innovation and entrepreneurship as part of its education reform. It has set up a five-layer innovation and entrepreneurship curriculum for all undergraduates and a four-layer training program. It has also built a number of high-level training bases, by integrating resources of national experimental teaching demonstration centers and key scientific research institutions at national and provincial levels. In accordance with the principle of " one competition for each school ", SCUT encourages and finances students to participate in high-level discipline competitions, with more than 3 million yuan of financing provided for 78 discipline competitions in 2018.
